- Cesium is a student organization at the University of Minho for software engineering students, providing opportunities for networking, collaboration, and skill development.
- Collaborate as a member of the CAOS (Centro de Apoio ao Open-Source) department, which is responsible for all software development activities within Cesium.

PROJECTS

Distributed Computing for Scalable Function Execution

LEAD DEVELOPER

Braga, PT

Oct. 2023

- Developed a cloud computing service for executing user-defined functions in a distributed environment.
- Designed and implemented a scalable system architecture with a central server managing task queues and coordinating multiple worker servers, enhancing scalability and fault tolerance.
- Established a task execution system allowing clients to submit code for execution on remote servers, with comprehensive error handling and result reporting.

CardBid

DEVELOPER

Braga, PT

Nov. 2023

- Dynamic web application using Blazor, C#, HTML, and CSS, aimed at facilitating card auctions and competitions among users.
- Implemented authentication and profile management features to ensure secure access and personalized experiences for users.
- Integrated a robust auction system allowing users to compete in real-time bidding wars for coveted cards.

Vintage Marketplace

DEVELOPER

Braga, PT

Feb. 2023

- Developed a robust vintage marketplace management system.
- Implemented administrative tools for user management, transaction monitoring, and report generation.
- Designed a user-friendly interface for effective interaction with the vintage marketplace platform.
